

~~{Abstract~~

~~†~~ ABSTRACT OF THE INVENTION ~~relates to a method in tail threading i)~~ HE
DISCLOSURE

In a web-forming machine, ~~{in which}~~ a threading tail is formed from the web. The
5 threading tail is transferred to the production section (10, 12~~-~~14) of ~~{a}~~ the
web-forming machine including a draw section (21) . ~~{In the method,~~
~~m)~~ Monitoring takes place of both the formation of the threading tail and its transfer
to the draw point (21). ~~{In the method, t)~~ The holding point (24) and its
environment that terminates the tail threading of the production section (10, ~~12--~~
10 ~~14~~ 12-14) in question are additionally monitored, in order to detect the threading tail
at the holding point (24) and thus to determine the success of the tail threading. ~~{The~~
~~invention also relates to a corresponding arrangement.}~~
